

## ***GEO-KS Key Switch Signaling Device:***

### ***PRODUCT DESCRIPTION:***

The GEO-KS signaling device is designed for applications where a standard fire alarm pull station is not practical, due to unauthorized access. Each unit is manufactured from a durable fluorescent 1/4" acrylic which almost appears to be illuminated, and a durable and reliable key switch which uses a standard government issue C250 key. The acrylic face is finished exceptionally with beveled flame polished edges, and all text is printed on the back of the plate which prevents any damage to it over time. Mounting options include flush, which only requires a standard single gang flush box and surface with the optional custom surface mount box. Security mounting screws are included with each device

Standard English printing reads "IN CASE OF FIRE INSERT KEY TURN TO RIGHT AND REMOVE", but Bilingual text is also available (see Fig.1), as well as custom design and printing (Fig.2). Integration into the fire alarm system is painless as no custom wiring is required, it simply connects in the same manner as a typical pull station. Operation is just as straight forward, simply insert the key, turn and remove. Due to its secure and durable design typical applications include Institutional installations such as Prisons or Psychiatric wards.

The GEO-KS key switch signaling device is a durable and reliable alternative to a standard pull station when security is of concern.

### ***PRODUCT FEATURES:***

- Manufactured from a durable fluorescent 1/4" acrylic.
- Acrylic so bright, almost appears to glow
- Reliable and durable key switch.
- Uses standard government issue C250 key.
- Available in standard flush mount using a single gang box, or surface mount with optional surface mount box.
